

### ■ General Description

The OCP78L05 is three terminal positive regulators designed for a wide variety of applications including local, on-card regulation. It integrates internal current limiting, thermal shutdown protection, and safe-area compensation which make them virtually immune from output overload. If adequate heat sinking are provided, these regulators can deliver output currents up to 100mA.

The device is a RoHs compliant SOT89-3L package.

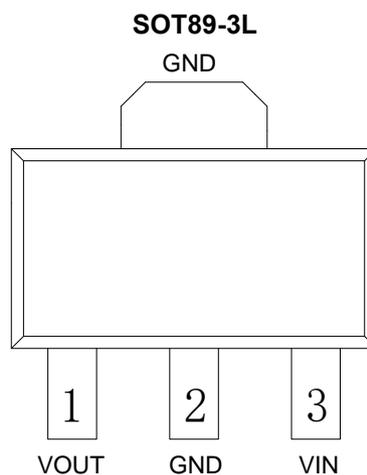

### ■ Features

- Input Voltage up to: 30 V
- Output Voltage: 5 V
- Output Current: 100mA
- Output Voltage Accuracy of  $\pm 5\%$  over the Full Temperature range
- Output Transistor Safe-area Protection
- Internal Thermal Overload Protection
- Internal Short-circuit Current Limit

### ■ Applications

- Consumer Electronics
- Microprocessor Power Supply
