

■ General Description

The OCH1405N is a switched Hall-Effect IC, which is for contact less switching applications. The device includes an on-chip Hall voltage generator for magnetic sensing, an amplifier that amplifies the Hall voltage, a Schmitt trigger to provide switching hysteresis for noise rejection, and an open-drain output. The bandgap regulator allows a wide operating voltage range. OCH1405N is rated for operating temperature range from -40°C to 150°C and voltage range from 3.8V to 24V. OCH1405N are capable of continuous 50mA sinking out and maybe cycled as high as 50mA maximum.
